

Steps that the HERE Map undertakes before it becomes an official Map Update for your Subaru:

Start

01. Verifying the Location Data:

HERE runs quality control tests so that situations like routing you the wrong way on a 1-way road don't happen.

02. Database Upload:

The entire database is transferred over to a partner company of HERE and Subaru for compilation.

03. Compilation:

This is when the raw data is compiled, so items such as the look and feel of the map and the routing algorithms can be read by the navigation hardware.

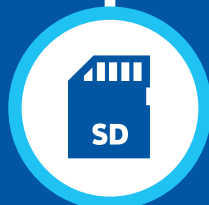

04. Creation of Golden Master:

Rigorous examination of the data is carried out and extensive road testing is conducted so that you will always be safely navigated to your destination. Only once this is done will the golden stamp of approval from all involved be given.

05. Distribution:

The final product has digital rights management attributes applied to protect against unrightful copying and distribution, and then is made available for distribution to the end-consumer.
